Subject: REINFECTION FROM REINTRODUCTION OF CYSTS IS NOT NECESSARY !

Dear Aquathin Dealer OnLine;

In several previous NewsBulletins and Forum Q & A's you will recall discussions concerning cysts i.e. crypto. Please review the correspondences below with my friend Roger Wiltshire. Managing Director of Aquathin UK, The Pure H2O Company, concerning the issue both here and abroad.

I respectfully recommend that you follow the directive to introduce yourselves (as many of you already have) to the physicians etc. listed below.

Warmest regards to all...as well, your comments are always welcome and very much appreciated.

FOR THE BEST TASTE IN LIFE

Think Aquathin..AquathinK !!

Celebrating our 23rd Birthday in 2003 !!!

(visit the allnew <http://www.aquathin.com>)

"Alfie"

Subject: Re: INFO FOR JIM IN SCOTLAND

Hi Rog;

I just, in the last 15 minutes, received a call from a local resident who had come down with crypto from the Ft. Lauderdale water supply. He stated he would never go through such pain and illness again...and did mention his doctor is seeing increased cases of at least 2-3 per week. That was a telephone sale !

May I respectfully recommend that you instruct Jim to visit with the physicians who specialize in gastro-intestinal, infectious diseases, HIV, AIDS and educate these people on your / his services. Here's their dilemma: people with crypto, giardia, mac & microsporidia can take an oral medication to croke the bug...but what do you wash it down with!?!? Reintroduction is a real problem! And once the patient having the bug is cured, for some reason they become even more suceptible the next time.

I believe this correspondence would be a proper Tech Bank emailing to Dealers.

*Awaiting your reply and warmest regards to all,
Alfie*

Yes - we had a mention on the radio up there but as usual everyone would rather risk the crypto than call us.

Jim is planning to take on a direct sales person soon.

Roger

Subject: INFO FOR JIM IN SCOTLAND

Hi Rog;

The information below is important for Jim for two reasons.

- 1. Were you aware of the considerable outbreak from Crypto? This is news to me.*
- 2. A study was done on Guam's indigenous peoples where ALS (Lou Gehrigs Disease), Parkinson's and Alzheimers diseases were 100 times the average rate. The increase had to do with bats as diet and contaminating waters forming neurotoxins. The proximity of Jim's bats to open reservoirs may be a forthcoming problem.*

*Warmest regards to all,
Alfie*

Bats Threaten Water Work in Glasgow

February 12, 2003

A colony of bats could delay plans to provide Glasgow with safe drinking water.

Hundreds of the bats have been found on the site earmarked for a £100 million water treatment plant and Scottish Water will now have to apply for a license to fell 13 trees used by the protected species to make way for the project.

The need for the new treatment facility was highlighted last August, when water supplies to 150,000 people in Glasgow were contaminated with the cryptosporidium bug.

But Scottish Water faces a £5,000 fine if it cuts down the trees - used by 400 pipistrelle, Daubentons, brown long-eared and Natteres bats - to make way for its new filtration system without a license from the Scottish Executive.

The Mugdock Association, which represents the interests of residents, has vowed to fight to save the bats.

Last August, the group successfully fought against the original plans for the plant, claiming it would spoil their quality of life and impinge on the amenity value of the area.

Rejecting the recommendations of their planning officials, East Dunbartonshire councilors agreed with residents and threw the plans out.

Revised plans were submitted by Scottish Water just three months later, and the size of the treatment works building has been reduced by 30 per cent, while the roof has also been lowered.

Last month, Dr. Harry Burns, the director of public health at NHS Greater Glasgow, also urged the approval of the updated plant.

In a letter to planning officials, he said: "Unless Mugdock water is filtered, I cannot give any guarantees that significant disruptions to domestic supplies will not be repeated."

But the revelation of the site's nocturnal inhabitants may now further stall the process. Advocates for Animals, an animal rights group, will also call on the Executive to refuse the application for a license. Scottish Natural Heritage, the conservation agency, has not objected to Scottish Water's proposals.
